

## Head-Start: for children needing help

**LANA KIMBALL**  
Universe Staff Writer

Instilling the positive is Adams' way of helping a child with special needs reach full potential.

Adams, head director of Provo Head-Start unit, is by building a child's self-esteem and confidence for success with school.

Adams, a 42-year-old woman, has a record in an "indoor gym," toys and a few of the few experiences available to school children at the Head-Start headquarters.

Miss Adams is not a teacher. She teaches her 42 and five-year-olds the way to count, ways to negotiate between colors and even of hygiene.

Even adults are having a hard time having a child on occasion, she says. Discipline is not a problem at the center.

Adams works with the program in other areas. Miss Adams thinks of Head-Start children as coming from "low income or poverty stricken areas, principally in the ghettos and

Shirley Adams helps children with special needs in the Provo Head-Start program. Children get first time experiences that will help as they begin school.

of good," she said.

In addition to mothers coming to the center as an aide, parents are also required to attend a parent committee meeting once a month. In this meeting they bring up problems and discuss them.

Miss Adams said this meeting was restricted only to parents of children in the Head-Start program, and the participants felt much freer to discuss problems among themselves rather than outside influences.

The parent committee elects representatives to a policy committee, which is also composed of community members. One of the policy committee's functions is to help parents make good decisions. The policy committee comes under the policy council, with Mrs. Anne Bennett as president.

Community donations and volunteer work also help the center. The children have been visited by doctors, dentists, and taken on trips to the zoo, fish hatchery and assemblies at BYU. Miss Adams said the children always come to BYU during Indian week, and it was a trip they enjoyed.

"For every dollar we get," Miss Adams said, "we have to turn in so many community volunteer hours." The program isn't run merely from government donations, the community must also show an interest by donating time.

## Golda Meir reconsiders resignation

**JERUSALEM (AP)** — Premier Golda Meir delayed submission of her resignation Monday as a stream of political colleagues called at her home to urge her to remain at the head of the Israeli government.

Mrs. Meir telephoned President Ephraim Katzir early today and told him she would call on him this morning to return her mandate to form a new Israeli government because of criticism of the new minority cabinet she had lined up.

But a night's sleep and the pleading of her associates in the Labor Alignment apparently cooled Mrs. Meir's anger.

A spokesman said she put off the visit to Katzir until late afternoon, and other aides said she was waiting to see if her associates could swing dissident members of the party behind her cabinet list.

Mrs. Meir announced her resignation at a meeting of Labor party executives Sunday night after some of her party's members in parliament criticized the new minority government she planned to present Tuesday.

"This is my final decision," said the 75-year-old grandmother as she stalked out of the party caucus.

Party leaders flocked to Mrs. Meir's Jerusalem home and pleaded until past midnight with her to continue at the head of the government. But Deputy Premier Yigal Allon reported she was "firm in her decision."

Mrs. Meir has led the Israeli government since 1969, and her decision to bow out plunged the country deeper into the political uncertainty that has beset it since Mrs. Meir to form a majority in the Knesset, Israel's parliament.

In the shock of Mrs. Meir's surprise announcement, the other Labor leaders concentrated on trying to get her to reconsider and did nothing about picking someone else to try to form a government. Finance Minister Pinhas Sapir, Ailon and Foreign Minister Abba Eban were considered the most likely to be tapped.

Meanwhile, Mrs. Meir and the cabinet with which she fought the October war and the Dec. 31 election remain in office as a caretaker regime.

Mrs. Meir's walkout came 48 hours after crucial talks with Secretary of State Henry A. Kissinger on arrangements for negotiations between Syria and Israel to separate their troops on the Golan Heights.

Political analysts said Mrs. Meir's move might not hamper progress toward a disengagement agreement since most leading Israeli politicians

## Landlords deliver statement

Officers of the Utah County Apartment Association say they have no knowledge of any infractions of law committed by the organization.

A written statement was distributed Friday by officials of the apartment owners group in response to the Utah Attorney General's issuance of an order for the organization to stop any unfair methods of competition.

The statement from the association was hand-delivered to Pres. Dallin Oaks at 11:25 a.m. Friday and turned over to the Daily Universe on Saturday.

As officers of the Utah County Apartment Association, we regret the recent publicity that we have received. We know of no infractions of state or local law, and we intend to continue to abide by all regulations governing us. Our goal is to provide quality housing in Utah.

The statement was written on a Utah County Apartment Association letterhead addressed P.O. Box 89, Provo, Utah, and signed by Association President Eugene Meier and Vice Presidents, Boyd Datwyler, R. Bliss Allred, and Merrill Gappmayer.

## Late line

By ASSOCIATED PRESS

**Report details cover-up**

LONDON — Sources indicate that two subjects of the grand jury report on President Nixon under discussion until Tuesday, the raising of hush money. U.S. Judge John Sirica received the 50-page report Friday and jury handed up indictments naming seven former President Nixon or his re-election committee.

**Heath may resign**

LONDON — Prime Minister Edward Heath called in key staff of his cabinet and speculation that the resignation of the conservative government may be imminent. At the same time, the opposition Labour party which won a majority in last Thursday's general election, but fell short of a majority, returned to London from a week of the capital, setting the scene for a possible power shift.

**Crash kills 344 in Paris**

PARIS — A packed Turkish jetliner exploded and slammed into the north of Paris, spawning debris and bodies. French authorities said all 344 aboard were killed, the worst civil air disaster in history. The trijet DC10 was on only five minutes earlier from Paris' Orly airport stop on its flight from Istanbul to London when it hit the forest under sunny skies, rescue officials said.

**Mistrial ruling expected**

NEW YORK — A judge is expected to rule today whether the conspiracy to assassinate former Atty. Gen. John F. Kennedy and ex-Commerce Secretary Maurice H. Stans should result in a mistrial. A motion for a mistrial was made Friday by Atty. Gen. James W. Ray, who instructed jury members to determine they should put themselves in the place of jurors who indicted the two ex-Cabinet officers.

## Landlord, local agencies fighting plan for canyon

**By HIGI WESLEY**  
Universe Staff Writer

A moratorium on building in Provo may have been lifted up in the future, but the building going on, according to Paulos, of the Utah County Commission.

The Utah County Planning Commission is working together with Provo's Soil Conservation Department, the Forest Department and several other agencies to determine the potentials of different areas of the canyon.

They are trying to identify the different areas of the canyon that could be used for different purposes, such as possible land developments and some for both residential and commercial purposes.

The groups which are involved in updating the original draft statement are University of Utah and Weber State College. The other groups are the Provo-Jordan River Parkway Authority and the Provo Canyon Planning Advisory Committee are also involved.

Recently, the Community Development Director of the Chamber in Orem, Ernest E. Evans sent a letter to the Highway Department stating the favorable attitude of the members of the board concerning the concept of an improved road through the canyon.

The members of the board in Orem felt that an improved road through the canyon will benefit the area greatly.

"Plans will be ready by July 1," said Paulos. "Once we finish the plan, it will be presented to the Commission for approval. If they are approved, then the canyon will be zoned accordingly," he said.

## Utah says Romney

**By PATTI HARRINGTON**  
Universe Staff Writer

Utah Attorney General Vernon B. Romney announced on-campus Friday, that the state of Utah is filing a lawsuit this morning against the federal government concerning Utah's oil-shale land which both the state and the federal government are claiming.

In the KBYU-TV taping of the "Current Events" program, Romney said he did not know the legalities of the federal government's claims, but felt that Utah had a strong case.

The land, which involves 157,000 acres was "chosen" as state land from his office in late September of 1965 to November of 1971 under the direction and approval of the federal government. Since that time, Romney said, the land has increased in its value because of the energy situation.

"The state of Utah feels that the increase in value is of no consequence," Romney said, but the federal government is disputing this, and asserting their right to the land.

The Attorney General also commented on the cease-and-desist order recently sent from his office to the Utah County Apartment Association. It was sent, he said, because of the "baseless" allegations and evidences submitted which would indicate price fixing" by some of the members of the association.

There are evidences of "illegal restraint" being practiced which should not be allowed, Romney explained, but did not comment further on the subject.

In reference to states' rights, abortion and capital punishment cases which have been ruled upon by the Supreme Court, Romney said the United States "has a Supreme Court that doesn't let the courts often times 'extenuate cases to provide for the procedural safeguards of the accused.'"

"Punishment delayed has about as much deterrent value on the guilty as does punishment not given," he said.

Many questions concerning the controversial rape and kidnapping crimes were asked of the Attorney General, who offered advice, particularly to women in avoiding being the victims of these crimes.

Emphasizing the need to keep doors locked and an unusual suggestion of keeping a dog in the house, Romney said the Salt Lake City Police Department had reported that they had "never had a case of a woman being assaulted when there was a big dog in the house."

Romney urged political involvement even though, he said, politics seem to be "inherently dirty" to a number of people in the nation. He felt there was "no greater secular activity which would better help one's fellowmen than politics and government."

## Exec Council acquitted in misappropriation case

**By CINDY DOMMER**  
Universe Staff Writer

The ASBYU Executive Council was acquitted Thursday evening on charges of misappropriation of funds for the purchase of concert tickets.

In front of a Budget Committee court, BYU student Mac Haddow was acquitted of the charges. He attempted to prove that complimentary tickets to ASBYU officers for the America and Carpenters concerts last fall were illegally funded without going through the Finance Office.

According to Michael Waddoups, ASBYU Finance vice president, Attorney General Derrin Watson defended the Council on the premise that last year's Council had passed a bill providing for complimentary tickets to each officer.

Waddoups said that the ASBYU constitution says all bylaws and policies expire 60 days after the new council takes office, with the exception of financial and election policies. Since the tickets were financial policies, they had not yet expired when the officers provided them.

Referring to the acquittal Waddoups said, "I frankly think that it should have gone the other way. I feel that last year's Council has no right to spend next year's funds."

Waddoups added, "I think Thursday night's judgment was just and fair considering what we brought up." He said Haddow should have contested that last year's council couldn't spend this year's funds, which Haddow did not do.

Mark Alexander, ASBYU Social Vice President, said that

## Drift team to open 'V' Military Week

Military week begins today, with the Air Force ROTC drill team performing on the west patio of the Wilkeson Center at noon, according to Mark Meyers, general chairman of military week.

Meyers also said that there would be a "command retreat at 5 p.m. today in front of the Administration Building."

A highlight for the week, according to Meyers, will be a special forum assembly Thursday, at 10 a.m. in the Marriott Center where Captain Chaeley, former Vietnam War POW, will speak. The Air Force and Army bands will play the prelude music for the event.

The week's activities will include performances by the Air Force ROTC drill team and Air Force "Footprints."

# Street project Ok'd for Orem

By MICKEY TOLMAN  
University Staff Writer

Orem Center Street has been approved as a number one priority road project by the Utah Valley Area Transportation Study (UVATS) Committee. For these projects federal road building money will be sought. The UVATS technical committee selected Orem Center Street to top the list of road priorities after reviewing various lists of streets presented by the different cities represented. According to Arlyn Spey, secretary of the technical committee, the streets projects were looked at if they were ready to go, and if they were not, when they would be.

"Few of the projects were ready to go," he added. The list will be submitted to the Mountainland Association of Governments (MAG). After MAG reviews the list, MAG officials will consider the designation of certain roads within a specified urbanized area.

"I'm sure it will be adopted immediately," Spey said. Once the list is approved in the Provo area, Salt Lake and Ogden officials will meet with area representatives to select priorities for the states. Approximately \$1.6 million is available in addition to some money left over from last year.

## The Week

**Monday**  
Home Evening.  
Voluntary Income Tax Assistance, Elizabeth Dining Room, SFLC, 2-6 p.m.  
Hobby Center—Dip 'N' Drapes Dolls, 3 p.m.  
Annual Student Art Show, HFAC Galleries.  
"Mimi Head Show," Wilkinson Gallery, ELWC.  
Varsity Theater—"Battle of Britain."  
Weekend Movie—"Thrill of It All."

**Tuesday**  
MIA  
Forum—James Buchanan to speak, "Prospects for America's Third Century," Marriott Center, 10 a.m.  
Hobby Center—Woodworking, 3 p.m.  
Annual Student Art Show, HFAC Galleries.  
"Mimi Head Show," Wilkinson Gallery, ELWC.  
Varsity Theater—"Battle of Britain."

**Wednesday**  
Hobby Center—Ceramics, 3 p.m.; Potter's Wheel, 7 p.m.  
Swimming—WAC Championships at Salt Lake City.  
Annual Student Art Show, HFAC Galleries.  
"Mimi Head Show," Wilkinson Gallery, ELWC.  
"Noye's Fludde," a Family Home Evening musical about the flood, Provo Tabernacle, 7:30-8:30 p.m.  
BYU Philharmonic Orchestra, de Jong Concert Hall, HFAC, 8 p.m.  
Varsity Theater—"Battle of Britain."  
Ice House Dance—Midweek Madness, Copperfield to play.

**Thursday**  
Take 10 Concert—Chamber Orchestra to play, Memorial Lounge, ELWC, 10 a.m.  
Voluntary Income Tax Assistance, Elizabeth Dining Room, SFLC, 2-6 p.m.  
Hobby Center—String Art, 3 p.m.; Leather, 7 p.m.  
Annual Student Art Show, HFAC Galleries.  
"Mimi Head Show," Wilkinson Gallery, ELWC.  
"Noye's Fludde," a Family Home Evening musical about the flood, Provo Tabernacle, 7:30-8:30 p.m.  
Faculty Recital—David Randall to play the clarinet, Madsen Recital Hall, 8 p.m.  
Varsity Theater—"Battle of Britain."  
Ice House—closed.

## The Daily Universe

The Daily Universe is an official publication of Brigham Young University and is published as a cooperative enterprise by the faculty. It is produced as a laboratory newspaper in the Department of Communications under the governance of a Management Team and the counsel of a University-wide Daily Universe Advisory Committee. The Daily Universe is published Monday through Friday during the Fall and Winter Semesters except during vacation. During the Spring and Summer terms, the University is published Tuesday and Thursday during the Spring and Summer terms.

Opinion expressed in The Daily Universe does not necessarily reflect the views of the student body, faculty, University administration, Board of Trustees, or the Church of Jesus Christ of Latter-day Saints. Second class postage paid at Provo, Utah 84601. Reentered September 27, 1962 under act of Congress, March 3, 1879. Subscriptions price: \$5.00 per semester. Editorial offices: 538 Fessenden L. Wilkinson Center, Provo, Utah 84601. Printing Services: Brigham Young University Printing Services.

# Department open house set tonight

# Author discusses controversial book

By CINDY DOMMER  
University Staff Writer

An open house for the Organizational Behavior Department will be held tonight from 3 to 5 p.m. in 347 ELWC.

A n y i n t e r e s t e d undergraduate student who is seeking a Master's Degree in Organizational Behavior is invited to attend a very informal discussion with faculty and students in the program, according to Lenny Ralphs, open house chairman.

Students who wish to attend may come during the designated time. Refreshments will also be served, he said.

# Speakers, talk themes scheduled

Several speakers will discuss various topics on campus this week.

Friedrich W. Vierhapper, University of Vienna, will address the Chemistry Department Seminar at 3:30 p.m. in 446 MARB.

The Enrichment Lecture Series of the Botany Department will feature Kim Harper as speaker Wednesday at 4 p.m., 456 MARB. The topic for the lecture will be "Floral Biology."

A. Burt Horsley will speak concerning "Peter and the Poppers" Wednesday at 8 p.m. in the JSB Auditorium.

Why and how she wrote her controversial book, "The Mountain Meadows Massacre," was discussed by Mrs. Juanita Brooks in an address entitled, "Who Pulls the Strings?" Thursday evening in the SFLC step-down lounge.

The lecture, part five of the "Women in Academics" week lecture series, was attended by about 60 people.

Mrs. Brooks first told how as a young girl in Nevada she met Patriarch Johnson whom she admired very much. She said that while she was teaching school he asked her to write some of his memoirs for him. She promised to do it, but not right away.

Later, when Johnson was on his death bed, she was told that he had been present at the Mountain Meadows massacre. She knew from this and other clues that the massacre was the subject on which he had wished her to write. She promised that she would write the story, she said.

Mrs. Brooks graduated from BYU, and later received her Master's Degree from Columbia University in New York.

Work with diaries in the 1930's began her interest in the subject, according to Mrs. Brooks. She has since written "The Diaries of John D. Lee," who was one of the men involved in the Mountain Meadows Massacre.

Throughout her life Mrs. Brooks said she has been helped and has worked hard in her research and writing. She

told of the concern she had that she might be excommunicated from the LDS Church because of her book, and how she took that chance anyway.

She described an incident in which Joseph Fielding Smith said to her, "Sister Brooks, with all the good things to write about in the gospel, and you choose to write that?" She said she answered, "Brother Smith, that was my task."

The attitude of "That was my task" characterized Mrs. Brooks' research into the massacre, in which Mormons killed about 18 children in a wagon-train of Missourians going through southern Utah to California.

She said, "If you are going to write history and really produce books, you must have a stern discipline." "If you can stay with it long enough, with the right determination you'll succeed."

# IDEAS FROM THE SOUND CHAMBER

By Bobby Allen  
What Is Watt?

When we are talking about energy consumption, as we might well be these days, it is fairly easy to define what watt is. A 100 watt light globe, for example, uses 100 watts per hour, regardless of brand. The light output of 100 watt light globes may vary a little but at least the energy consumed is always the same.

When shopping for fine sound equipment the question "what is a watt?" is harder to answer but the answer is important. In sound equipment a watt should be defined as a unit of measure indicating the power output of a piece of sound equipment and thus give some idea (not absolute) of what to expect in musical business produced by said piece of equipment. But the terms are not constant and an experienced person shopping for sound equipment is likely to be deceived.

Have you seen the ads for a package stereo which includes a record changer, AM-FM tuner, 8 track player, speakers, sells for \$200, and on top of all that is rated at 100 watts or more. At yet a quality stereo receiver consisting of an AM-FM tuner and an amplifier, without turntable, tape player or speakers, rated at 30 watts, sells for \$500.

What is the difference? Besides the fact that the \$500 receiver has better quality and reliability and has more sophisticated control features, the wattage ratings are completely different. The \$200 package advertizes 100 "peak" watts (and note that the ads for these never mention which rating system is used) which results in a relatively high figure. Peak wattage refers to the amount of output power an amplifier can produce for a brief instant, for a sudden peak in the music. Peak power is hard to verify, it would be hard to prove whether the \$200 package stereo in question really produces 100 watts or just what.

State-of-the-art sound equipment is rated by constant output (RMS). The difference between RMS watts which can be relatively easily measured, and peak watts can be immense. We have heard of a case where a stereo console rated at 300 watts (constant) output was only 6 watts! It is then obvious that if the 30 watt \$500 receiver was rated on the same scale as the \$200 package stereo it could have a mammoth power rating.

There are still other output power rating systems between peak and RMS but the main point is that if a manufacturer won't supply an RMS wattage output figure, the output power is probably fairly low, even if a high peak wattage figure is claimed. Even more important, truly is the relationship between the actual (RMS) wattage and the sound pressure level produced in your listening room. In our next column "dB" or "watts can do" we will talk about the surprising amount of wattage increase needed to produce a perceptible increase in loudness.

THE SOUND CHAMBER AT Alvers 36 North University

ROMPETER DANCE MARB 9

Couples that have already been "matched up" are invited to attend a Skyroom Dinner-Dance, March 9, at 7:30 p.m., featuring "Five Deep." Tickets are only \$6.00 per couple. Hurry—only 100 tickets

# Silver booms in Provo

by DAVID CLEMENS

the promotional brochure, the investor sees a photograph of holding a silver medallion, toward a waiting hand, like "If God about to touch life into slo's Adam." "Universal Trade assurance you can hold in your caption reads.

The 'crash' book *How to Prepare for the Crash*, Constitution Mint founder president Robert Preston tells value to investors in beating the at will "destroy the entire structure of the United States." Celebrating silver bandwagon has Local coin dealers will sell 10 bags of silver coin for the price of more than \$4,000. And Salt Lake City will sell you 100 small Utah silver properties, with the prediction "You're gonna go up like storm

troopers," although some of the mines have not produced in years. Silver is up—way up—on world markets, as is its sister metal, gold. Both metals have recently hit all-time highs, gold at over \$180 an ounce and silver at over \$6 an ounce.

Other side But on the other side of the ledger, investment counselors and bankers warn that the same law of supply and demand that has pushed silver prices from \$1.32 an ounce in November 1971 to over \$3 in January 1974 to between \$5 and \$6 now may bring prices sliding down once again.

"The little investor who's hoarding silver is going to get hurt," says a Provo coin dealer who sells silver for the little investor to board.

"Most people don't make a profit," comments L. Dwight Israelsen, professor of economics at BYU. "You will see a leveling off or a drop in the price of silver in the next few months."

But whether silver be bonanza or bust, people are buying. No figures are available on the number of troy ounces (about 14.2 to the pound) of silver changing hands in Utah, but Universal Trade and Constitution Mint say they expect to sell a total of about 10,000 ounces of the metal in 1974. Both companies and silver miners and retailers who buy silver bullion from large dealers in New York, mint it into one-ounce

medallions and bars up to 100 ounces, and sell it at a 20-40 per cent markup. They sometimes buy bullion elsewhere, as well, occasionally under market prices—Universal says it has bought silver from the national bank of an unnamed country.

Constitution says it sells from \$2.5 million to \$4 million worth of silver a month. Universal reports in its promotion brochure that it "has forecasted to sell 3,160,000 ounces of silver minimum on the retail market in 1974 for a profit of \$900,000-plus."

Most of the business of both firms is out-of-state, they report. They sell silver to large and small investors, but Universal in particular says it is moving away "from the little old lady in tennis shoes" toward more substantial investors. Some silver is sold, as well, to groups such as pension funds, says Universal's president Doug Warren and Constitution's president Jim Rutter.

## Volume not disclosed

Coin dealers in the Provo area—there are at least three who will arrange deals for a \$1,000 bag—do not give figures on volume of silver sold, but one dealer acknowledges he has sold as many as 15 bags at one time to clients.

Both coin dealers and retailers are tight-mouthed about their clientele. Neither Universal, Constitution, coin dealers nor stock brokers would supply names of local investors. Perhaps a due to the apparent secrecy of the market can be found in Preston's book. "It will be important that as few people as possible know that you are buying silver coins," he writes. "Your coins will probably be safer under your own control than under someone else's (sic.)"

But silver is becoming popular and well-enough known that some Provo merchants will accept it in payment. Monday Magazine tried to exchange a one-ounce medallion from Universal Trade for goods and found that the second men's store tested accepted it at full value. The first men's store would not accept the silver because, the salesman said, the owner was not there.

Silver deals of all kinds are becoming well-advertised. Although Universal and Constitution limit their advertising, doing most promotion through direct contact, other firms such as Salt Lake City's branch of California's Pacific Coast Coin Exchange do advertise.

## Advertising 'Questionable'

Promotion is good enough in Utah that the Utah Attorney General's Consumer Protection Division "has two or three calls a week from people wanting to find out about silver before they sink money into," according to Dan Morris, administrative assistant.

Assistant Attorney General Robert Hansen notes that some silver advertising has been "questionable," such as an ad that projected silver prices to 1980, based on past rates of increase. "The graph went right off the chart," Hansen says.

In addition to coins and privately-minted silver, silver mining properties are expected to rise in value as well, according to stock broker Ed Coltharp of Salt Lake City. Utah is among the top three states in the U.S. in production of silver, according to S. Wilson, Utah liaison officer of the U.S. Bureau of Mines. The state produced some 4,300,000 ounces in 1972, Wilson reports.

Investors are not the only ones interested in Utah's small silver mining properties. Universal's Warren foresees his firm's entry into refining, jumping from this into actual mining.

"We have already bought enough concentrate to pay for building refining facilities when the concentrate is refined and sold," Warren says. "Then we'll go into mining—eventually we feel we'll be self-supporting by our own mines."

"If we get our refining capacity going now, when mining starts to build again in this area, the miners will eventually want to be bought out," he predicts.

At least two productive mines in Utah had to shut down three years ago, precisely from a lack of refining facilities, the Bureau of Mines' Wilson says. They are the Deer Trail Mine at Marysville in Piute County and the Ophir Hill Mine near Ophir in Tooele County. They closed when the refinery they used at Lark was closed by United States Smelting.

## Claims in Colorado

Constitution is already into mining. Rutter says, with a 27-claim mine in Colorado and three more mines under exploration. None of the mines are currently in production, he notes, but at least one is expected to open in the spring.

Although both Universal and Constitution are getting into all aspects of silver processing and sales, one area in which they do not deal is selling silver futures to customers. Constitution does trade in silver futures as a company.

Futures are contracts to buy or sell silver, entered into months in advance. If an investor buys a futures contract in March 1974 for September 1974, for example, he may hold the contract until September, at which time he will either sell for a profit, if the market has gone up, or for a loss, if it has gone down. He may also trade or sell the contract prior to its maturation, or he may actually buy the contract, if he is wealthy enough to take delivery.

The Provo branch of Bosworth and Sullivan does not trade in silver futures. And Merrill Lynch, Pierce, Fenner and Smith's local office, which does trade in the contracts, reports only about 10 contracts outstanding, according to Mike Barrick, account executive.

"Investors must have a net worth of \$50,000 excluding equity in a home before they can go into the futures markets," Barrick cautions.

## Trading Hazardous

Bosworth and Sullivan manager Stan Collins explains why silver futures trading can be hazardous to the small investor: "While an investor may buy a 10,000-ounce New York contract on margin (financial loan for credit buying) for as little as 10-15 per cent, he is also required to maintain a certain amount of equity in his contract."

Thus, if his contract drops the daily maximum of \$1,500 for more than two

# Monday Magazine

An employee from Constitution Mint stirs a vat filled with molten silver, getting ready to ladle it into molds. Provo is one area of the nation where mining is growing into a big business. More than 10 million ounces of silver are sold from Provo annually to a growing number of investors.

days, and if he must keep \$5,000 in his account, he will be forced to replace his loss with cash. This procedure is known as a margin call; it has been the downfall of some investors, Collins says. For when the market begins to drop, investors may be trapped in a declining contract, paying more and more in margin calls, while no one will buy.

Investment in privately-minted silver bars and medallions, as well as in U.S. coins, can be fraught with peril, too. The main drawback to such investment is uncertainty of finding a market in which the silver holder can sell for a profit, investment counselors and bankers warn.

"Is there a market for the silver bar?" wonders a local banker. "Where am I going to sell it when and if I need to? How convenient is the market?" Constitution Mint and Universal Trade both deal in one-ounce medallions and 100-ounce bars. Prices for the medallions are about 35-40 per cent over average New York prices for silver. Thus, when silver recently stood at \$5.62 an ounce, Constitution and Universal sold their medallions for \$7.60 and \$7.55, respectively. Constitution also deals in 10, 25, and 50-ounce bars, and Universal has a five-ounce bar.

Both firms say they will not buy back their own silver, nor that of other firms. If they did, they say, they would be providing an investment opportunity and would be subject to regulation by state and federal securities commissions. Constitution says its salesmen will help arrange deals between customers wanting to sell and customers wanting to buy.

"People who buy silver are usually reselling it, so they will buy only at a price that will allow them to resell at a profit," says Collins, speaking both of the minting-sales companies and of coin dealers.

## No universal market

And there is no universal market for silver outside of the commodity exchanges of New York, Chicago, and some foreign cities such as London.

"The industry is still in the infantile stages—a universal market is coming," says Lawrence W. Jenkins, marketing director for Universal. But he does not venture a guess as to when such a market will be developed.

Another possible drawback to investment with private silver companies is pricing. Prices in some areas of the private silver market are highly arbitrary, a recent issue of the Wall Street Journal suggests.

The Journal quotes the president of the Pacific Coast Coin Exchange as saying, "Our daily price quote is the only reliable gauge" of the exchange's prices, acknowledging that neither bullion nor bag prices in other markets reflect the value of his clients' investments except over a long term.

## Provo pricing

Arbitrary pricing seems to prevail in Provo, as well. Last week when New York price closed at \$5.43 an ounce, Universal's price for a one-ounce medallion was \$7.30. Constitution's was \$7.70.

If such silver questions as uncertain market and arbitrary pricing exist, why are Utahns, like many Americans, flocking to stock up on the glistening hardware?

The answer seems to be at least two-fold—industrial use and investor fear

of inflation, devaluation, and depression—according to Collins, Warren, and Rutter.

First, silver is a metal with many industrial uses. The Commodity Year Book for 1972 lists photography as the greatest consumer of silver at 38,251,000 troy ounces. Electrical contacts and conductors, sterlingware, solders, batteries, bearings, catalysts, jewelry, mirrors, and dental and medical supplies bring the total industrial use of silver to 146,701,000 ounces a year.

Coinage accounts for only 2,284,000 ounces a year in the United States. Since 1965, when silver was taken out of quarters and dimes and greatly reduced in half-dollars, coinage use of silver has been minimal.

The same force that pushed silver out of coinage is helping increased industrial demand squeeze silver prices up, experts say.

That force is shortage. U.S. silver imports significantly exceeded exports in 1970-72. Refined production has lagged behind consumption since World War II, according to Federal Reserve figures.

Shortages, of course, can be changed into abundance and consequent low prices by alteration in demand or in supply. Possible tapping of large reserves in India might lead to an abundance of supply, Collins suggests. In photography, an alternate process to the current silver

salt method of producing images is being sought, although no satisfactory alternate has been found yet. Invention of an alternate process could push demand for silver down in what is now its largest industrial use.

The second factor influencing demand and high prices is the desire of investors to stabilize wealth and protect it from inflation, devaluation, or complete collapse of the economy.

Inflation reached its highest rate in 22 years in the fourth quarter of 1973, the Associated Press reported recently. U.S. inflation rose at an annual rate of 8.8 per cent during those three months.

Universal's promotion brochure proclaims, "Silver has become the best assurance available against inflation."

In *How to Prepare for the Coming Crash*, Robert Preston attributes intrinsic value to silver, and advocates its ownership "as a protection against the loss of your life's earnings and savings."

"When paper currency greatly or even completely loses its value, you will need something that still has value to use as money," Preston continues. "Silver will not only have retained its value, but will actually have gone up in value, relative to the depreciating value of other forms of wealth."

But the chairman of BYU's Department (Continued on Pg. 6)

er has been processed, Constitution Mint imprints their insignia. The silver bars of 10, 25, 50, and 100 ounces.

HAROLD B. LEE LIBRARY  
ROBERT A. FISHER ARCHITECTS

This artist's rendition of the library describes the addition of the Harold B. Lee Library. The Library addition will look basically the same except for a penthouse floor. Construction on this addition could begin next fall, making 1976-77 school year the expected completion date.

### New service additions

By  
ROBERT SMITH

Jim, a senior at BYU, enters the reserve library and finds his usual spot in the northwest corner. Frustration mounts within him as he attempts to concentrate over the din of squeaking chairs and loud voices, all the time rubbing elbows with the co-ed on his left. Jim's attempt to study in seclusion seems hopeless.

In the Harold B. Lee Library during the past year, 1,126 books were marked as "missing." Only a little more than 600 were located and returned to the shelves. The rest disappeared through the exit control "without a trace." At the semester's end, term papers, reserve readings, and finals hit students all at once, creating a strong desire to "burn the midnight oil." Time is important, yet students are forced out of the library at the 11 pm closing time. All of these "hassles" in the BYU library may soon be a thing of the past. The cure-all? A multi-million dollar addition to the library, scheduled to be

completed during the 1976-77 school year.

Waged a campaign

For the past one and a half years, the faculty and administration of BYU have waged an all out campaign to solve library problems of students and faculty. The new addition, say administrators, will solve the current log-jam and streamline the library facility.

"We've tried to be sensitive to the needs of all our patrons," says Douglas P. Bush, assistant director of the Harold B. Lee Library and in charge of the development of the new addition. "One of the main considerations in planning the addition was to make it a part of the new existing library."

Bush explains the plans for the library as he shuffles through papers at his desk on the third floor of the library. "As you can see," he says, "the exterior of the new addition will be an almost exact duplication of the present Lee Library, except for the additional penthouse floor. We don't want people to look at the

addition as an annex, but rather as just a part of the Harold B. Lee Library." The new library (twin) will be constructed just south of its mate. It will contain some interesting solutions to the problems now faced by the present library facility.

With the new addition and a planned expansion of the bookstore, Bush says, the bookstore parking lot could give way to either buildings or an extension of the mall that now separates the Engineering and Martin Buildings.

Bush points out that elimination of the bookstore parking lot would do away with the present library loading dock. A possible solution to delivery access, he says, will be a service tunnel. This tunnel will connect an underground second floor loading dock to the road which runs along the south side of the Wilkinson Center. The present loading dock would then become an outside entrance to the proposed new reserve library, making it possible to keep this area open during hours when the rest of the library is closed, perhaps on a 24-hour basis.

"The academics office has approached us with the idea of extending the library's hours," Bush says. "This relocation of the reserve library and the outside entrance will allow us to make such an adjustment." One key to the new library complex, Bush continues, is a central connecting building which will join the old and new library structures. "This area will contain the public service heart of the library," he says. "The reference desks, librarians' offices, and main passageway will fill the 7,000 square-foot connecting building." Generally, each subject area will simply expand its collection and services across to the new addition, permitting added study space in both buildings of the library.

#### Moveable walls

Once the move is made into the new addition, there can be adjustments in space through the use of what Bush called "moveable walls." These walls are designed so they can be moved to enlarge an area or installed to create a room. The new addition, Bush says, should be able to handle the rapidly expanding services of the BYU Library. "If we continue at the present rate of growth—about 90,000 volumes per year—we will reach our

Photo by

The present library contains many service areas. The for the addition include several additions, including, per 24-hour library operations.

goal of two million volumes by about 1985," Bush explains. "This will just about fill the proposed library complex. The seating capacity will increase to hold about one-fourth the student body with the use of newly designed carrels and tables built for four." Some 40 group study rooms will be available to faculty and students with 83 small, special research rooms for indepth research. Computer terminals could be placed in these small research rooms, giving the researcher access to computer systems on campus and throughout the U.S.

#### Book security

The library design will also help alleviate book theft. With installation of a "book security system" called "Little Tape," the missing book problem at BYU should be drastically reduced, Bush declares. The system includes thin metallic strips concealed in a cross-section of books. These emit a low-frequency electronic signal when stimulated by electromagnetic fields. These fields are generated at the turnstiles near the library entrance. If a book is not checked out, a detector will ring an alarm and lock the turnstile. This system would replace the current exit

control and numerous volumes could pass through the turnstiles as long as books are checked out. A computer system is considered that would check-out time to about seconds a book. This uses a "computer wand" is passed over a book student ID card simultaneously, recording information into computer. Periodically all books checked by whom, would be to the public for easy

#### Other Services

Some of the other offered for consideration include extension of hours, central copying and eight typing rooms being considered for archival photo lab, and lounges, and reading out of the flow of traffic. How long do we wait? "super library" The Committee on Expansion gave their approval February 12, 1977, permits the architects A. Fowler Associates Architects—to prepare drawings for the new addition. Bids will then be advertised late summer. Construction could begin next fall 1976-77 school year expected completion date.

## EXCURSIONS

"Excursions," a special program that KBYU-FM airs every weekday evening at 10:00 p.m., explores through sound the world in all of its many facets. March promises to be an exciting month of "Excursions."

## SPECIAL WEEK

This week (March 4-8) "Excursions" will be featuring five addresses from the Eisenhower Symposium, provided by National Public Radio. All of these speeches deal with man's change and what it means to us as individuals and a nation. Starts tonight at 10:00!

Yosemite Falls, 2,425 feet into the Valley in California, highest waterfall in America.

An instructor in Tonga teaches two children in the Church Education System. The Student Development Association is bringing aid to the children in this system.

-In Bolivia \$60 will educate a student for one year. School supplies in the Philippines cost \$300. A \$9,000 bus could transport Lamanite students to seminary.  
-It costs the Church \$30 per student to produce home study materials for one year. Most students can only afford to pay \$5, and additional funds are needed to make up the difference.

-In Guatemala some LDS families are required to "ration" their children's public school attendance, sending only one child a year because they cannot afford the \$5 enrollment fee.  
-LDS philosophy holds that "without literacy an individual is handicapped spiritually, intellectually, physically, socially, and economically." Education allows an individual to contribute to the world around him and further his own self-realization.  
-How can the Church meet these economic and educational needs on a worldwide basis?  
-In 1972 the Church instituted a pilot program, "Project Concern," to involve youth in raising funds for less fortunate members' needs. The project produced \$42,000 and was considered so successful by its leaders that they decided to introduce it to a larger audience.

Students raise funds  
Seminary students in Logan raised \$1,800 for Bolivian members and Salt Lake students raised \$9,000 for those in Peru.  
In Auckland, New Zealand, an area considered needy, seminary students contributed \$352 and requested that the money be used to help those "who needed it more."  
Other groups have launched projects, each one netting between \$12 and \$20 for the cause.  
"I think we should all be willing to give our time and effort to bring happiness into other's lives," says one volunteer. "I feel this is a good program because I love the Lord and His Church and I feel that by participating I am in a small way helping to spread the gospel throughout the world," remarks another student.

Members Dave McDougal, Cami Heward, Art McKinlay and Phil Anderson discuss plans for education in foreign countries.

## NOW ANYONE WHO COULD USE AN EXTRA \$1000?

maybe?  
\$1000 (before taxes) is about what you could make your first year in the Army Reserve. \$1000 a month, or a new set of wheels, or just plain fun.  
How it works: First comes eight weeks of basic training (seven for women). Then a few months of job training.  
How many depends on the job you choose.  
Personnel work, or communications, leadership or lab technology. Training that could very well land a better job after graduation.  
If you come home, to join an Army Reserve unit in your community. From then on, all we ask of you is to report for training sessions a month (usually all on one day), and a couple of weeks during the summer.  
We have openings now for men and women, with or without previous military service. Interested? Call 374-0289. I free 1-800-453-5579.

THE ARMY RESERVE.

provo floral  
201 W. 100 S.  
373-7001

An Arizona LDS youth said he enjoyed the program because it served two purposes for him—Charity toward others and the feeling of being one in purpose to help build Zion. He said it helped him realize the Church is worldwide.

Recipients are thankful  
Members in South America respond to the program with appreciation. A program coordinator in Bogota, Colombia says, "We feel the spirit of the Lord very close to us when we see how you dedicate your talent and time to help brothers and sisters in other lands."

"This support brings great help to the youth and the development of the Church in general," he continues.  
To continue this program, four BYU students made a trip last semester, to Las Vegas, Nev. and Los Angeles, Calif. representing the Church Commissioners of Education, to make fund raising presentations to regional seminary and institute directors.

SDA members participating in the first project of its kind in Church history include, McDougal, Cami Heward, senior, Art McKinlay, junior, and Laurie Anderson, junior. As they were preparing to leave for Los Angeles, Frank Hershey, finance director for the Church Education System contacted the four students and requested they stop in Las Vegas to present the program

to seminary and institute leaders there.

Long trip  
At 7:30 the next morning, Dave, Cami, Art and Laurie, were outlining the program to seminary directors of the Las Vegas area, the Executive Council of the University of Las Vegas Institute and 10 students representing 2,000 LDSA members.

After the two-hour meeting the students proceeded to Los Angeles, where they met with Carl Bacon, director of Special Projects for the Development Office and SDA advisor and SDA president Phil Marriott. The following morning they addressed a group of 30 seminary and institute coordinators in the Los Angeles area.

These students wanted to inform leaders of the rapidly developing and expanding Church fund raising programs, and wanted to make preparation for future follow-up trips through effective means of communication.  
Members of the Student Development Association believe the idea of Churchwide fund raising projects, coordinated among seminary and institute age youth offers unlimited potential in assisting Church educational programs throughout the world.  
If the concept materializes as many involved individuals believe, Dave, Cami, Art and Laurie of the SDA, may have earned the key in opening the door to the future.

This machine, developed at BYU, is used to test industrial noise levels. Federal regulations require noise levels be within a range that will not cause hearing damage to workers.

Photo by Roger Hatch

John Simonsen, chairman of BYU's Mechanical Engineering Department studies information on the dragon tooth used to muffle and test industrial noise

## BYU tests noiseless valve

By ELAINE ASTON

A hand reaches down and touches a switch in a building behind the new Engineering, Science and Technology Building at BYU. Another turns a valve and a torrent of pressurized air rushes from a large tank, races through a pipe into a box-like affair and then escapes into the atmosphere.

This system of tanks, valves, and pipes is used by the Department of Mechanical Engineering to test noise levels of industrial valves.

With the passage of federal

laws protecting factory workers from dangerously loud noises, industries using high-velocity gases or liquids are looking for ways to reduce noise levels in their factories and refineries.

Hot issue

"This is a hot issue right now," says Dr. John Simonsen, chairman of the Mechanical Engineering Department, as he explains that valves are a primary source of noise in factories.

In a recent article published in the medical Journal Transactions, ear and throat

specialist Dr. Maurice Schiff discusses the effects of loud persistent noise on the human body. He says such a noise produces direct physical changes including the constriction of peripheral blood vessels, alterations in blood pressure and heart rate (due to stepped-up output of adrenalin), disturbance of equilibrium, and increased gastrointestinal activity.

Noise can also make palms sweat, the pupils dilate, the skin grow pale, the eyes close, and the muscles tense, Dr. Schiff says.

Dr. Simonsen says a Provo-based company has developed a valve which will meet the demand for noise reduction in industry.

Valve technology

Called Valtek, for valve technology, the company was organized seven years ago by two mechanical engineers from Boston and one from California. Dr. Simonsen says the company has a subsidiary in Canada and licensees in England and Australia.

The new valve is called the

"Dragon Tooth" because of its internal structure which consists of a zig-zag shaped flow passage resembling sharp teeth. Air or fluid rushing through this passage is slowed down in the sharp turns, Dr. Simonsen says. Tests have shown that this design cuts the noise appreciably, he adds.

Valtek has asked the Department of Mechanical Engineering to test their Dragon Tooth valve. The company is paying two graduate students, Bruce Bassett and Mel Andrews, to conduct the testing. They are advised by Dr. Simonsen.

Testing began last August and should be concluded by the end of the present school year, according to Dr. Simonsen.

Developing design criteria.

He explains the graduate students' "job is strictly testing" the valves. Data gathered from their work will be given to Valtek to assist them in developing design criteria.

The system used for testing the valves includes a large tank

from which pressurized flows through a pipe, a cabin-like insulated box the valve is located. Dev either side of the measure pressure temperature in the p enters and leaves the These devices are wire computer. A microph the echo-free box meas noise produced by the This data is also fed in computer. The data is plotted for use in evaluations, Dr. Si says.

The first tests conducted the two students a standard open pipe valve to measure the noise pressurized air create. Later they inst standard industrial v obtain data from comparisons could be with the "noiseless" val

Testing will now be d the "Dragon Tooth" itself, Dr. Simonsen says.

## Silver mint cont.

(Continued from Pg. 3)

of Economics disagree.

"Whether or not silver represents a viable hedge against inflation and depression become critical questions," writes Dr. Larry Wimmer. "The answer is that nobody—including Robert Preston—knows. What can be known for certain is that the purchase of silver as a hedge is a highly speculative and risky venture which one should not go into uninformed."

"For example, if you had bought silver in 1968, at the beginning of the acceleration of our current inflation, by 1971 you would have lost 46 per cent of the purchasing power of your wealth plus the interest foregone if the money had been invested elsewhere," Wimmer continues.

The argument of silver's value as a protection against inflation remains unresolved. But it is clear that there is one further factor influencing purchasers of silver—perhaps, in the long run, the most potent.

"Emotion plays a big part in the demand for silver," says Bosworth and Sullivan's Collins. "If people can get emotionally involved with toilet paper, it's not hard for me to understand how they can get emotionally involved with silver." (A recent toilet paper "shortage" was exacerbated by consumer panic buying.)

Constitution's Jim Rutter admits that silver "can get in the investor's blood, like

gambling." His company has a display case full of medallions and bars inside its front door, to introduce the visitor's blood to silver.

A local banker confirms the passion silver can arouse.

"After Preston's book hit (in 1971) we had people coming in here wanting to mortgage their homes, pledge everything" to get money to buy silver, he recalls. Silver salesman who "sell the sizzle instead of the steak" are also responsible, in part, for silver hunger, he says.

Universal's Doug Warren admits, "A salesman will say anything," although he adds that Universal has two supervisors for salesmen in each of four sales regions of the U.S. Salesmen for both Universal and Constitution are independent businessmen who receive only a commission for their sales, the firms say.

Stan Collins attributes the local popularity of silver to two factors: the proximity of silver mines and the Mormon pioneer heritage that teaches "self-reliance and preparedness—that means having something that's not dependent on currency, whether it be silver, gold, or food."

But perhaps the best explanation of the silver boom comes from this description by Montana Senator Mike Mansfield of the people of the West.

"They like the feel of heft in their pockets. To them, the jingle of silver dollars is silver sound that signifies liquidity."
